

EVA's Don't Fit Dress Shoes

Top Covers

Select the top cover style that best suits your footwear. Most people require the need for both a short(3/4 style) and a long(Full length style). To determine which style you will need, first look to see if your shoes have a removable insole.

3/4 style- If there is no removable insole then a 3/4 style is needed. These types of shoes are usually casual and dress shoes with limited space. A 3/4 style adds the extra support without making the shoe too tight.

Full length style- Make sure the top cover selected is the same thickness as the removable insole in your shoes. If a thicker top cover is selected, the shoes will be tighter than before. Most athletic shoes have a 1/4"(6mm) removable insole, while casual shoes have only a 1/8"(3mm) insole. If you select a thicker top cover for more padding, just make sure your shoes have a little extra room.

Grey Plastizote- Provides good cushion with adequate durability. Plastizote is an open cell foam that breathes well. It is a hypoallergenic material designed to be soft and comfortable for even sensitive skin. Most popular top cover for full length EVA and 3/4 plastic orthotics. Available thicknesses are 2mm and 3mm.

Nogahide- Simulates a leather look and feel. It is long lasting and thin profiled to fit small volume shoes. The surface texture does not grip socks making it easier to get shoes on.

Sports Top- This is closed cell EVA foam designed for durability. Being closed celled makes this top cover waterproof and ideal for sports or work. Optimal for activities that requires durability against perspiration, water, and dirt. Not recommended for customers that require high shock absorption. Available thicknesses are 1.5mm and 3mm.

Dual Cloth- Researched and developed with HyPUR-cel® open-celled polyurethane foam technology. Ultra Low compression set makes this top cover have great shock absorption with increased life. Laminated with a breathable cloth top for comfort. Can be used on 3/4 and full length models. Available thicknesses are 1.5mm, 3mm and 4.5mm.

Dual Plastizote- A laminate of 3mm HyPUR-cel® and 2mm Plastizote. The double layer provides 5mm of total padding. Use this top cover when plastizote is needed for sensitivity and durability is needed. Available only in a 5mm thickness.

Dual Nogahide- A laminate of 1.5mm HyPUR-cel® and 1mm Nogahide. Provides a very thin but durable top cover for low volume footwear. Available only in a 2.5mm thickness.
